Basic Ratios and Proportion Practice #3

Proportion

- 1. If Peter can pack a box in $4\frac{1}{2}$ minutes, how long will it take him to pack 20 boxes?
- 2. If each box weighs 12.4 kg, how many can fit on a pallet rated for 1 tonne (1,000 kg)?
- 3. It takes Sally 55 minutes to stack 200 boxes onto pallets. How long would it take her to stack 450 boxes?
- 4. If you walk at 6 km per hour, how long does it take to walk 15 km?
- 5. How long does it take a pump working at 5.5 m³ per hour to remove 12 m³ of water?

Ratio

- 6. OOO What is the ratio of white to grey shown?
- 7. Simplify 3.6 : 1.2 to the simplest possible ratio.
- 8. If there are 24 Catholics in a class of 30 boys, what is that in the simplest ratio?
- 9. If the ratio A : B is 3 : 4 and there are 60 As, how many Bs are there?
- 10. Split \$98 in the ratio 1 : 4.

Conversion

1 Euro = US\$1.38

- 11. How many Euros will you get for US\$300?
- 12. How many US\$ will you get for 240 Euros?

Answers: Basic Ratios and Proportion Practice #3

There are usually many ways of answering these questions (but only one correct answer).

1.	$20 \times 4\frac{1}{2}$	90 minutes (or $1\frac{1}{2}$ hours)
2.	1000 ÷ 12.4 = 80.645 Need to round down	80 boxes
3.	$200 \div 55 = 3.6363636$ boxes per minute $450 \div 3.6363636 = 123.75$ (note: do not round until the end. The 3.63636 is <i>Alternatively we can do it as a fraction of the origi</i>	123.75 minutes (about 2.06 hours) not 3.6 or you lose 16 whole minutes) <i>inal time:</i> $\frac{450}{200} \times 55 = 123.75$ <i>minutes</i>
4.	15 ÷ 6 =	2.5 hours
5.	12 ÷ 5.5 = 2.181818	2.18 hours (131 minutes)

Ratio

			Answer = \$19.60 : \$78.40
10.	1:4 means there are	1 + 4 = 5 shares. \$98 ÷	5 means each share is \$19.6
9.	3 : 4 = 60 : 80	(× 20 on both sides)	There are 80 Bs
8.	24 Catholics : 6 Others	S =	4 : 1
7.	3.6 : 1.2 (× 10) = 36	: 12 (÷ 12) =	3 : 1
6.	000000	white : grey = 2 : 4 =	1:2

Conversion

$$1 \text{ Euro} = 1.38 \text{ US}$$

 1.38 US

11.	300 ÷ 1.38	217.39 Euros

12. 240 × 1.38 331.20 US\$
